AI Proposal Triage Process Flow

MATACS-TH-2026-02

1 Admin / Human Review

Configure criteria, review flagged items and provide final approval.

1. Configure criteria
Mandatory checks + weighted criteria

2. Upload proposals
PDFs stored securely; evaluation created

6. Human verification
Review unknowns, evidence and security alerts

9. Final human approval
Confirm result or override with reason

2 AI Document Understanding

Extract information and identify risks from proposal PDFs.

3. Extract proposal facts
Licence, WSIB, insurance, price, experience, timeline, warranties, team and evidence

4. Return structured extraction
JSON + evidence/page + confidence; flagged items (e.g., human review, suspicious content)

Security handling
Detect and ignore prompt-injection or untrusted content; log for review

Review flags / security alert

3 Backend Rules & Results

Validate data, check requirements, calculate scores and generate ranking.

5. Validate extraction
Schema checks, required fields, corrections and evidence

Mandatory checks

PASS

7. Score eligible bids
Deterministic weighted formulas; criteria version for evaluation

8. Build ranked results
Rank, cleared proposals, keep flagged/ ineligible proposals unranked

FAIL / UNKNOWN

Flag for human review
Request clarification

= Admin / Human = AI = Backend / Rules = Human Review

Only PASS proposals proceed to scoring.
Human decisions and corrections are audit-logged.
